Bottled water has transitioned from its precocious youth to energetic adulthood. After stringing together years — indeed, decades — of exceptional growth, the category established its firmly entrenched position in the U.S. marketplace.

- The sort of growth that saw it double in volume in less than a decade and become the second largest beverage category by volume while still outperforming other major beverage types no longer characterizes the category.
- Nonetheless, by any objective measure, the bottled water category has been the greatest success story in the history of the beverage industry — and the story is far from over. Even after achieving significant size, bottled water's growth potential has not been extinguished.
- Case in point: the bottled water market doubled in a 14-year span (2003–2017), towards the end of which it became the largest beverage category — overtaking carbonated soft drinks (CSDs). This marked a major milestone.

U.S. residents' thirst for bottled water can be attributed to several factors.

- Many consumers recognize it to be healthy, safe and convenient.
- It is a versatile product, suitable for consumption at any time of day and need not be kept cold (like soft drinks or juice) or warm (like coffee or tea).
- As far as ready-to-drink commercial beverages go, it is relatively inexpensive, and with competitive pricing it is becoming increasingly affordable for consumers.
- Various packaging types, ranging from bulk to single-serve, facilitate a variety of uses. Consumers' interest in foods and beverages that confer benefits above and beyond refreshment also contributes to the quintessential hydrating beverage's performance in recent years.
- As concern about obesity persists, bottled water's lack of calories appears that much more attractive to consumers.
