A variety of factors should contribute to the continued, if not particularly dramatic, enlargement of the U.S. dairy alternative beverage market.

- Beyond the simple growth of the overall U.S. population, the faster growth of certain segments — namely, Hispanic, African-American and Asian — associated with higher levels of lactose intolerance could contribute to increased demand for non-dairy alternatives to fluid milk.
- The ever-expanding array of dairy alternative beverage types from those made
 with already familiar nuts like almonds and cashews to those derived from less
 familiar herbs and seeds like flax and hemp provide more options for
 consumers who may have an aversion to one plant or another as well as to milk
 itself.
- In addition to new types, there's the ongoing influx of new flavors and formulations, which could appeal to growing numbers of consumers, regardless of whether or not they dislike or cannot stomach actual milk. While soymilk may have initially resonated with consumers for whom taste was not the primary concern, beverages that actually do taste good, while also checking off other boxes on the list of requirements (dairy-free, gluten-free, genetically modified organism-free, etc.), inherently have the chance to grow more popular.
- The leading dairy alternative beverage companies WhiteWave and Blue Diamond have long track records as successful enterprises with resources to promote their wares (which in both instances include products besides beverages). Nonetheless, room remains for bigger food and beverage companies to enter the game should they so choose. While companies like Coca-Cola and PespiCo have dabbled in dairy alternatives such as soymilk or soy/fruit blends, a fuller commitment by such industry powerhouses could make a huge difference in the category's future.
- Indeed, another food and beverage industry giant became deeply involved in the dairy alternative beverage market when Danone purchased WhiteWave in mid-2016. And Campbell Soup Company bought Pacific Foods in 2017.
- Besides coffee shops, where certain people have long preferred non-dairy options to milk, dairy alternatives have yet to penetrate off-premise channels to any significant extent. If they were able to become staples in venues beyond Dunkin' Donuts and Starbucks, then they would move along new avenues of growth. While the opportunities in restaurants and aboard airplanes may not be enormous, they are big enough to be significant for a relatively small category like dairy alternatives.
