9 Energy Drink Share of Advertising Expenditures by Media 2016 – 2021 ----- 22

Despite the arguable requirement of energy drinks to contain a sufficient amount of sugar for the energy function, market realities have dictated the development of low-calorie energy drinks.

- With many people taking in too much sugar already and given the fact that some people crave caffeine without necessarily choking down teaspoons of sugar, low-calorie energy drinks such as Red Bull Sugarfree, Monster Energy Lo-Carb and Rockstar Sugar Free, among others, meet a need state.
- These top energy drink companies have also increased the number of diet energy drinks on offer in recent years. Notable products in this regard include Red Bull Total Zero, Monster Ultra and Rockstar Pure Zero. Monster Ultra has added several variants and collectively is Monster Beverage's number two seller behind the original Monster.
- In general, diet drinks tend to appeal more to females — and undoubtedly diet energy drinks have brought women into the franchise — but as males get older they are increasingly more likely to switch to diet versions of their favorite drinks, particularly if the marketing is perceived as “cool” enough — the main examples in the CSD realm being Diet Mtn Dew and Coca-Cola Zero Sugar. PepsiCo has used a hybrid sweetener approach with success for its “energizing” CSD line, Mountain Dew Kickstart, without calling that much attention to the fact that it is mid-calorie.
- What's more, one of the hotter energy drink brands to emerge was Bang, which is zero calorie. Consumers either probably don't realize it's zero calories or don't care, as their focus is on the ingredients that confer energy and other performance-related bona fides. (For some on the keto or paleo diets, zero calorie is a plus.)
- Low-calorie energy drinks have risen from 17.3% of energy drink volume in 2006 to 42.7% in 2021. Low-calorie energy drinks had only come into existence in January 2003 with the launch of Red Bull Sugarfree.
- Low-calorie energy drinks outperformed their higher-calorie counterparts in 2021, a trend which should continue in the next five years. Diet energy drinks should increase their share of volume from 42.7% in 2021 to 51.2% in 2026. Their share of wholesale dollars is expected to grow from 40.2% to 48.9% in the identical five-year period.
