Although it has become commonplace to cite an interest in healthy products as motivation for consumer behavior (even as Americans scale ever greater highs in obesity), the low-carbohydrate diet fad did have a determinative impact on the non-alcoholic (as well as alcoholic) beverage industry in the first years of the 2000s, while a more general concern about calories and sugar affected the marketplace in subsequent years. While weight may be an oft-cited concern, other aspects of health and wellness also inform recent developments in the non-alcoholic beverage market.

- As juice makers and tea makers tried to concoct products to please consumers not satisfied with the nutritional benefits already associated with such products, CSD companies sought to reengineer their sweet drinks.
- A key element in this initiative was the removal of sugar. To make low-carb fruit juices, beverage makers removed some juices' naturally occurring sugars and replaced them with artificial sweeteners.
- Although CSD makers are at a disadvantage when it comes to health-related trends, the leading companies did respond to perceived consumer interest by devising reduced-carb products in 2004 and new and/or reformulated diet SKUs in 2005. While mid-calorie CSDs did not catch on, diets remained a crucial component of the category. In 2009, CSD companies also introduced products with newly approved no-calorie sweeteners like stevia. In 2010 and 2011, they revised the idea of reduced-carb and -calorie offerings like Dr Pepper Ten and Pepsi Next. More "Ten" iterations of Dr Pepper Snapple Group brands appeared subsequently.
- CSDs made moves to cultivate the healthier side of things by introducing all-natural and vitamin- and mineral-enhanced sodas. Part of this initiative involved moving away from high fructose corn syrup (HFCS) in favor of natural sugar.

The healthfulness of its ingredients was one issue that did not disrupt bottled water's once seemingly unstoppable ascent. Instead, bottled water temporarily stalled because of aforementioned economic factors as well as issues of consumer perceptions.

- Despite having warmed to the category sufficiently to make it bigger than any other besides CSDs, consumers might have decided the convenience of bottled water was a luxury they could do without during troubled times.
- Additionally, concerns about the environmental impact of packaging water and shipping it, sometimes great distances, gave some consumers pause.
- Even so, bottled water's performances in 2010 and 2011 clearly showed that consumers have not abandoned the category, which 2012 and 2013 confirmed.
